

## **THP & GPS STRIPPERS**

### **GENERAL:**

These strippers are designed to remove a wide range of positive and negative photo resists used in the printed circuit and graphic arts industry, including silk screen ink and touch up inks. It is also recommended for the fast removal of RISTON and DYNACHEM dry films.

These strippers are rapid in action, causing resists and inks to lift and remain in suspension almost immediately upon submersion in solution, which is used full strength.

### **APPLICATION:**

1. Immerse part in solution for approximately 1-2 minutes. Avoid carrying water into the tank since water can spoil the product if carried over to excess.
2. ALWAYS USE COLD.
3. Rinse with forced water spray to remove all traces of stripper residue.
4. Air dry completely before proceeding with the next step.

### **HANDLING INSTRUCTIONS:**

No neutralizer bath is necessary. Ventilation should be provided in the work area to prevent vapors from accumulating. Avoid contamination with water. Use at room temperature. Contain in polyethylene, stainless steel, ceramic or glass tanks.
